

REMARKS

Status of the Claims

No changes have been made to the claims since the changes made by the Examiner in the Examiner's Amendment mailed on June 10, 2010. Claims 1-34, 36, 40, and 41 have been cancelled. Claims 35, 37-39, 42, and 43 have been allowed.

Amendments to the Drawings

No new matter has been introduced by the replacement drawings. These drawings were amended only to correct the discrepancies between the drawings and the text of the specification noted by the Office of Patent Publication during preparation of the application for issue.

Specifically, FIG. 2 has been amended to properly identify view "C" (of FIG. 2 as originally filed) as "FIG. 2C." FIG. 2C was identified and described at page 10 of both the specification as originally filed and the substitute specification and at paragraph [0042] of the published application, U. S. Patent Application Publication 2007/0224181 A1; hereinafter "published application."

The individual views shown in FIG. 19 were not identified in the figure as originally filed. Thus, FIG. 19 has been amended to properly identify each view shown, *i.e.* FIGS. 19A-F. FIGS. 19A-F were identified and described at page 19 of both the specification as originally filed and the substitute specification and at paragraphs [0124]-[0128] of the published application.

Amendments to the Specification

No new matter has been introduced in the amendments to the specification. The specification was amended only to correct the discrepancies between the drawings and the text of the specification noted by the Office of Patent Publication during preparation of the application for issue.

No new matter has been added by the amendments to the Brief Description of FIG.8. The Brief Description of the Figures section has been amended only to correct the descriptions of FIGS. 8F and 8G. As filed, the description of FIG. 8F was inadvertently assigned to FIG. 8G and vice versa. See page 13 of both the specification as originally filed and the substitute specification and paragraphs [0076] and [0077] of the published application. Views F and G of

FIG. 8 were correctly identified in the drawings as originally filed and also described in Example 7.

No new matter has been added by the amendment to the first full paragraph at page 51 of the specification as originally filed (also at page 51 of the substitute specification and paragraph [0229] of the published application). This paragraph has been amended only to identify the description of FIG. 2C presented, but not identified as filed, therein. *See* Brief Description of FIG. 2C.

No new matter has been added by the amendments to Examples 18-24. These Examples have been amended to correct the figure numbers/views such that the experiments disclosed therein match with the correct data/figures. The errors are in labeling only; all data/figures/experiments were disclosed in the specification as originally filed.

Conclusion

All informalities noted by the Office of Patent Publication are corrected with the submission of the specification amendments, replacement drawings, and accompanying remarks. Accordingly, this application is now in proper condition for issue.

No fees are believed to be due at this time. However, please charge any required fee (or credit any overpayments of fees) to the Deposit Account of the undersigned, Account No. 500601 (Docket No. 7056-X08-23).

Respectfully submitted,

/Paul D. Bianco/
